

Sona: Care Journey & Product Overview

An AI practice partner that reduces admin burnout in UK private Speech and Language Therapy (SLT), giving clinicians more productive time for care across a client's first 30 days.

WHAT IS SONA?

Sona is an AI practice partner for UK private Speech and Language Therapy (SLT).

It does the repetitive admin alongside the clinician: intake, consult prep, triage, the first session plan and family summary, all as drafts the clinician reviews.

Sona augments clinicians; it increases human productivity: less admin burnout, more time for care.

HOW TO READ THIS

Three views, read left to right:

Executive: the journey and the value

Product: the proposed solution

Process flow: the To-Be swimlane

WHO'S WHO

Client, parent or carer: the family or the adult client.

Clinician (SLT): the therapist. Practice: the private clinic.

ANCHOR PRINCIPLES

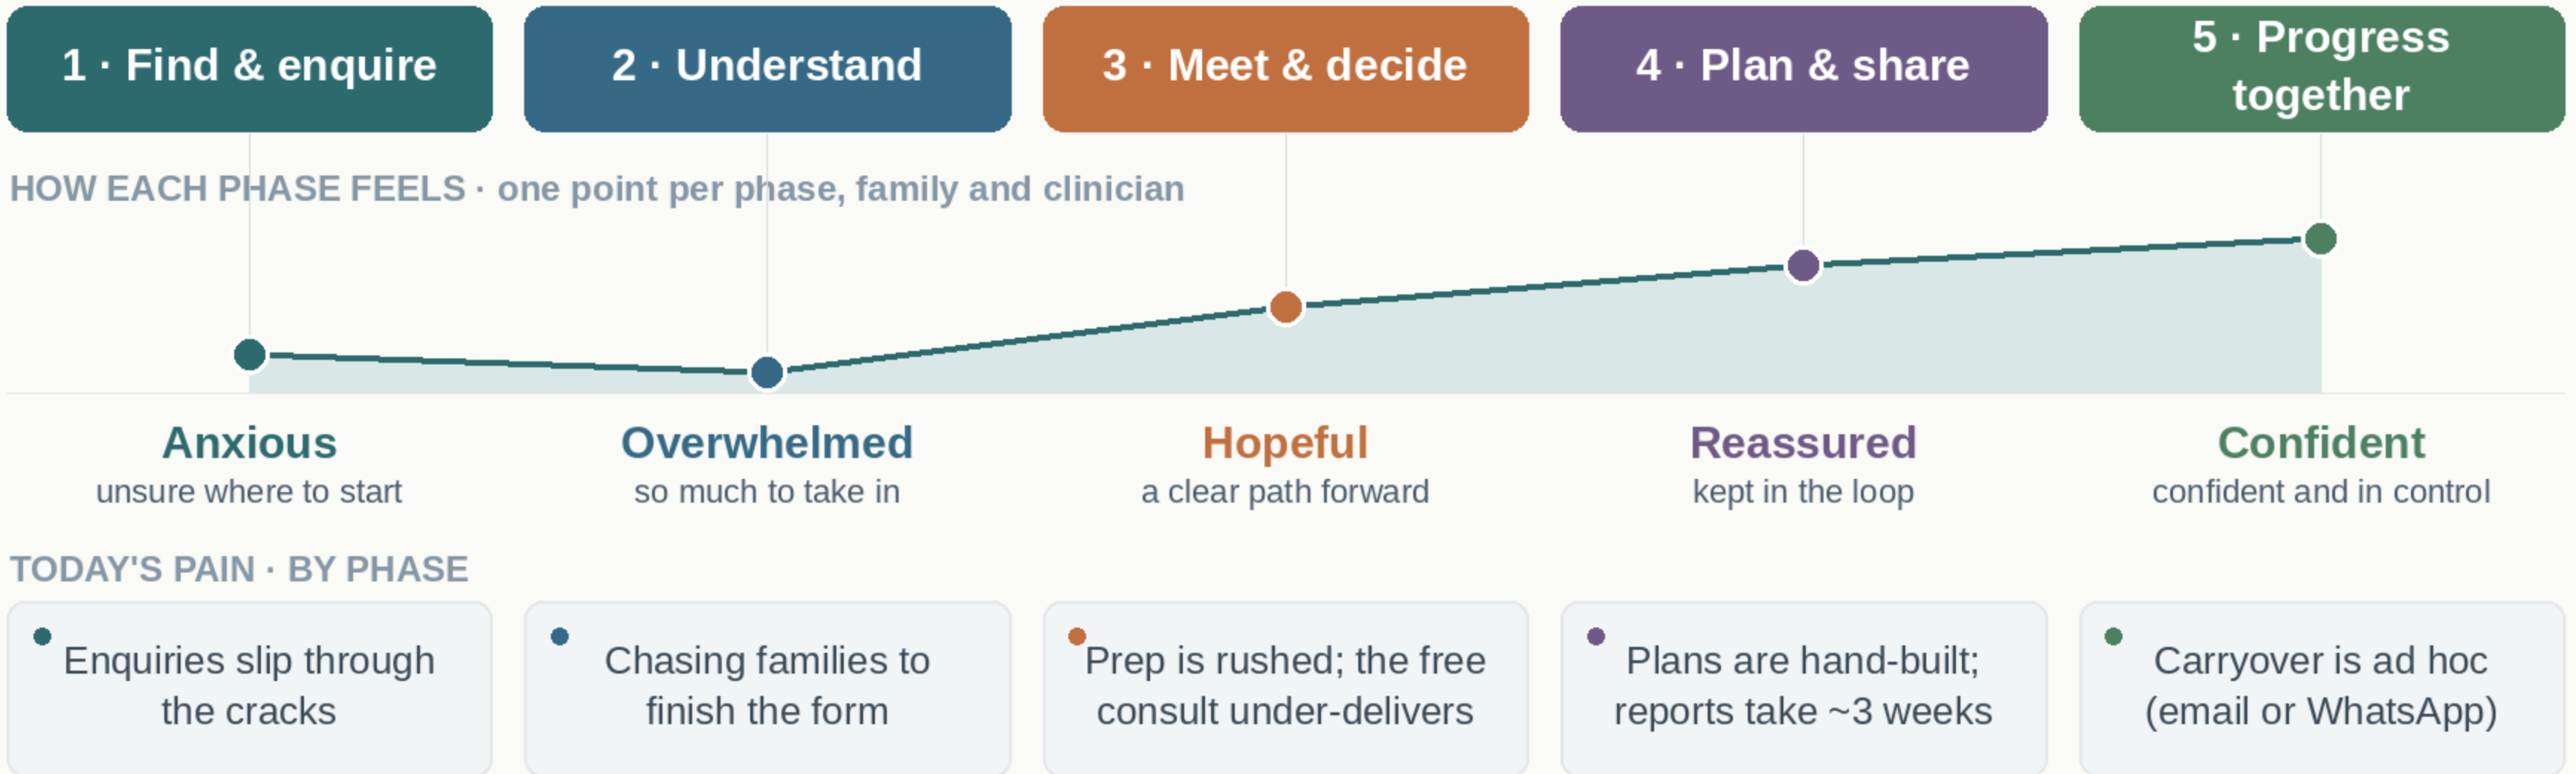

AI drafts; clinician decides

UK data residency + audit

Augment people, never replace them

The care journey at a glance

How a new SLT case feels today, and where Sona reduces admin burnout and adds value across five phases.

TARGET OUTCOMES

≥ 4 hours a month

productive hours given back to each clinician

Same-day

client summaries and reports, versus the ~3-week manual baseline

The proposed solution

The first 30 days as nine stages grouped into five phases: what Sona does and the surface that delivers it.

Phase	Find & enquire	Understand		Meet & decide			Plan & share		Progress together
Stage	1 · Referral	2 · Smart intake	3 · Intake review	4 · Consult prep	5 · Consultation	6 · Triage	7 · Session plan	8 · Family summary	9 · Carryover
What Sona does	Capture enquiry + audit trail	Adaptive intake + status + consent	One-screen client overview	AI prep brief (DRAFT)	Schedule consult (calendar, video)	Capture triage + rationale	AI session plan (DRAFT)	Tone-adjusted client summary	Resources + progress portal
Surface / owner	Clinician web	Family or client app	Clinician web	Clinician web + AI	Clinician web + calendar	Clinician web	Clinician web + AI	Client app + AI	Client app + web

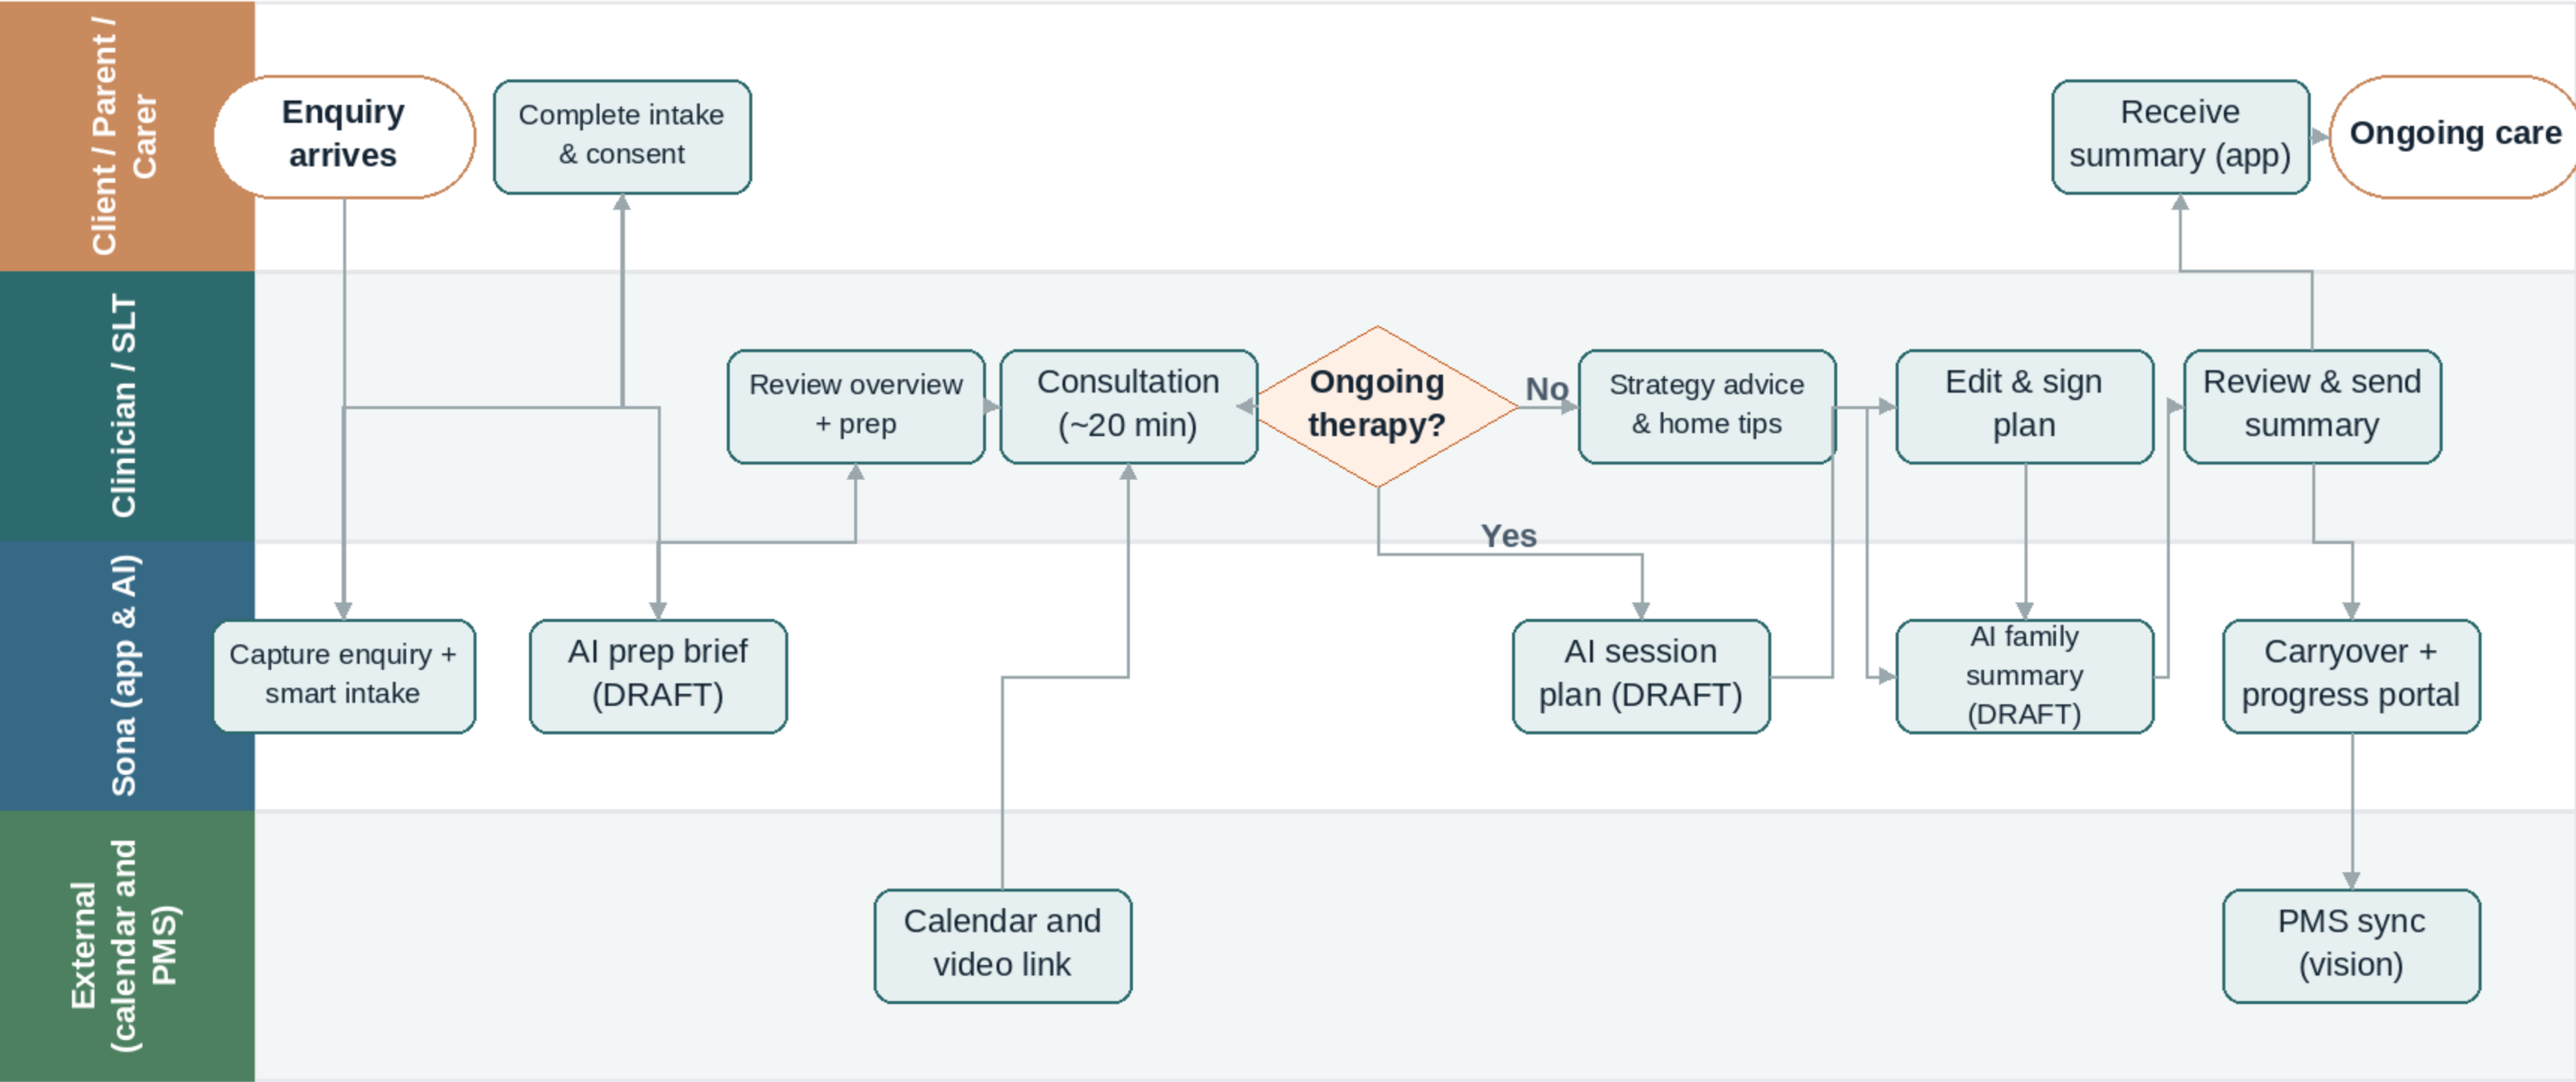

WHERE SONA WINS

Own the first 30 days as one loop	Trust is the moat; the clinician signs every draft	Start paediatric, then generalise	UK data residency + clinical audit
-----------------------------------	--	-----------------------------------	------------------------------------

Colour groups the nine stages into their five phases. · Generalised across SLTs (paediatric and adult).

How the journey runs with Sona

A swimlane map of the proposed (To-Be) process: the basis for prototypes and screens.

Shapes: rounded = task · diamond = decision · pill = start or end. DRAFT = AI artefact the clinician reviews and signs.
