

SPEECH THERAPY MVP · FEEDBACK PREVIEW

What if the Tuesday-afternoon admin block came back as **therapy time**?

Sona is the **AI practice partner for private speech & language therapy**. It does the repetitive admin alongside the clinician — as drafts they review and sign — across one prepared case, from a parent's 8-step intake to a clinician-reviewed summary.

AI drafts; clinician decides

Augment, never replace

UK data residency

MEET THE HERO OF THIS DEMO

Meet Aria.

"Hard to understand at nursery — drops final consonants and some sounds replaced. Some attention drift in 1:1 play."

AGE
4 years 2 months

REFERRED BY
Nursery SENCO

HEARING
Two ear infections, resolved

SETTING
Linden Nursery, London NW3

DIFFICULTIES FLAGGED
Speech sounds · Staying on task

EXISTING THERAPY
None — first referral

Aria M. DOB 15 / 03 / 2022

TODAY, THIS IS YOUR INBOX

Six fragments. One child. No structure.

Every new referral starts as scattered context. The clinician spends the first 30 minutes just assembling the picture. The free 20-minute consult call begins before the prep is done.

VOICEMAIL · MON 09:14

"Hi, it's about Aria... nursery suggested I get in touch. She's 4, and... sorry, I'm at work — can you call back?"

Anna M. · 07700 900 101

REFERRAL LETTER (PDF)

STICKY NOTE

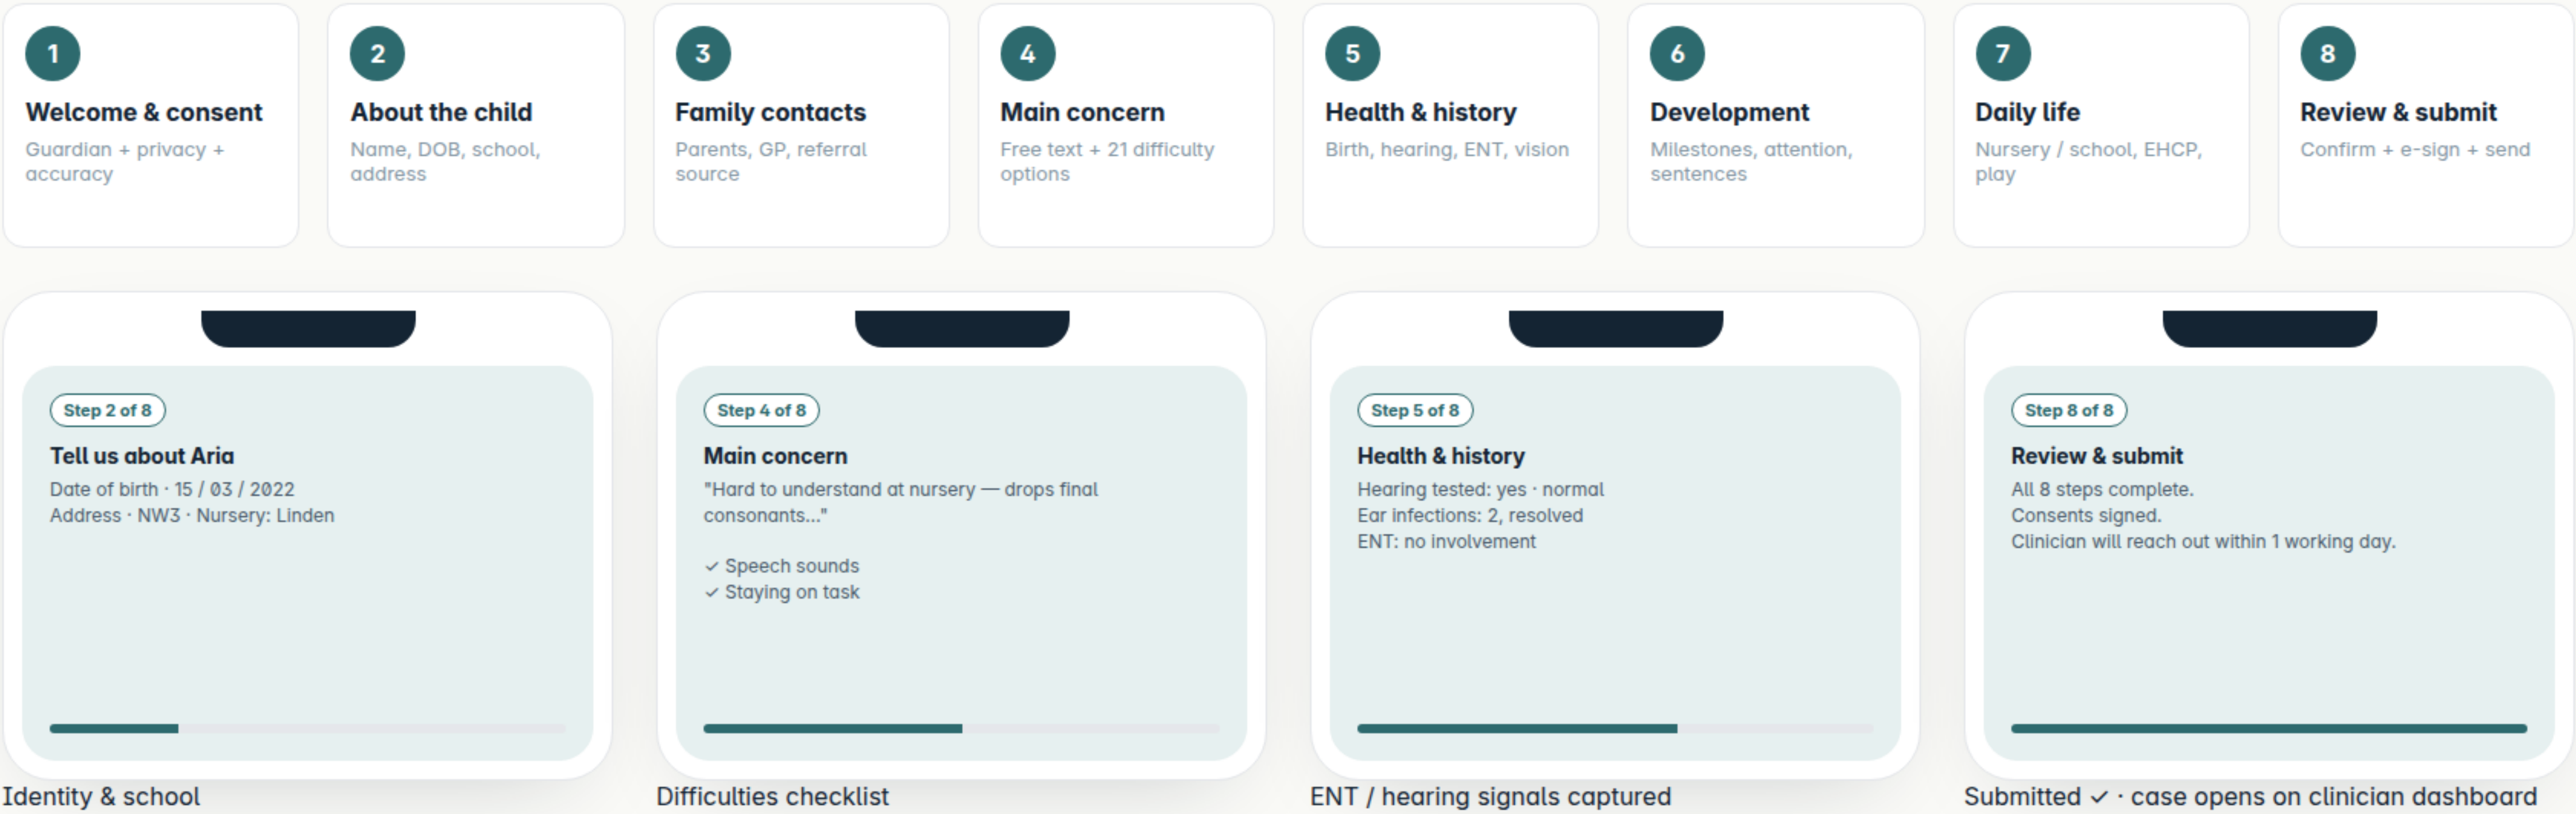

"Aria's nursery said she's frustrated when not understood — ask in consult."

Your notes app · Wed

PARENT JOURNEY · ALREADY BUILT

8 steps. One phone. ≈ 15 minutes.

Anna does the intake on Aria's nursery pick-up bench. The form saves on every tap. The clinician opens the case the next morning to find every signal already where it should be.

YOU OPEN THE CASE

Sona has already read it.

A starting hypothesis appears beside the intake — never instead of it. The clinician reads, agrees, edits, or overrides. Every action is logged.

- 1

Suggested triage pathway

One of four outcomes with confidence level and a 2-sentence rationale grounded in the intake.
- 2

3 probe questions

Questions to verify the hypothesis on the consult call. Click-to-mark "asked".
- 3

Red flags surfaced

ENT history, frustration cues, family history — things easy to skim past in raw intake.
- 4

Always DRAFT

No outcome is recorded without the clinician explicitly saving it.

sona / clinician / case CASE-2026-0142 · prep

Prep brief · Aria M. (4y 2m)

Referral from Linden Nursery SENCO · received 14 May 2026 · free consult booked Tue 19 May, 14:30

DRAFT — clinician must review

SUGGESTED TRIAGE PATHWAY

Short block · 4–6 sessions

Confidence: medium

Aria presents with final-consonant deletion and mild substitution at 4y 2m, with intelligibility concerns flagged at nursery. Hearing screens normal, no family history, sociable temperament — a focused short block targeting final consonants and one substitution pattern is a defensible starting point pending probe-level confirmation on the consult call.

PROBE AREAS FOR THE CONSULT

01

Confirm phonological processes at sentence level (final consonant deletion, fronting): present a 10-item picture probe.

02

Check stimulability for /k/, /g/ and final stops in isolation and CV / VC contexts.

03

Screen attention to single-step instructions in 1:1 vs distraction — calibrate against nursery report of "drift in 1:1 play."

RED FLAGS NOTICED

Two prior ear infections — re-check ENT history

Parent reports growing frustration when not understood

Design-fidelity mock — not generated output

THE 20-MINUTE CONSULT, CAPTURED

Triage outcome in three clicks.

After the call, the clinician confirms which pathway Aria is on, drops a one-line reason in their own words, and saves. Sona starts drafting the session plan the moment they hit save.

Aria M. / clinician / case / triage

Out of scope — ENT / OT / paed.

YOUR REASON (1 LINE IN YOUR OWN WORDS)

"Final-consonant deletion confirmed at sentence level; stimulable for /t,k/. Sociable, no language concerns."

Save outcome & draft plan

Override AI suggestion

Logged as triage.recorded · clinician = Monal · 14:58

THREE CLICKS, IN ORDER

1

Confirm outcome

AI suggested "short block". Clinician agrees — one tap.

2

Drop a 1-line reason

Their own words — feeds the session-plan draft.

3

Save & close

Audit ledger updates. Plan draft starts.

WHY IT MATTERS

Override is healthy. Sona tracks overrides as a feedback signal, never as an error. The clinician's recorded outcome is the only authoritative one.

apps/sona clinician triage screen · seeded with Aria persona

06 / 12

FIRST-SESSION PLAN

Drafted while you make tea.

SMART goals, activities, home practice, materials and parent goals — in one coherent draft, generated the moment you save the triage outcome.

≤ 15 min

target time-to-plan (vs ~35 min today)
docs/ml/session-plan.md · "T2P"

🔗 EHCP-aware framing

For Jaden (7y, stutter, EHCP under annual review) the same draft adds an EHCP badge and reframes goals as measurable and EHCP-linked — flagged for clinician compliance check.

First-session plan · Aria M.

• DRAFT — clinician must review

Outcome: short block · 4 sessions, fortnightly · drafted from intake + triage notes

GOALS

EHCP FRAMING: NOT REQUIRED

1

Produce final /t, d, k, g/ in CVC words with 80 % accuracy in structured tasks across two consecutive sessions. SMART

speech sound

2

Use targeted final consonants in 5 self-generated phrases during a 10-minute play sample, with one model maximum. SMART

speech sound

3

Maintain attention on a 1:1 listening task for 4 minutes with minimal redirection by session 4. SMART

attention

ACTIVITIES

- Auditory bombardment with target final-consonant minimal pairs (5 min).
- Pretend tea-set routine with embedded /t, k/ targets (cup, cake, pot, hot).
- Picture-book naming with delayed model + visual prompt cards.
- Final-sound listening lotto — quick win at end of session.

MATERIALS

- Minimal-pair picture pack (final /t, d, k, g/)
- Tea-set props · Sona "sound week" magnets
- Listening lotto board

HOME PRACTICE (5 MINUTES DAILY)

- "Sound-of-the-week" picture cards on the fridge — 3 reps at breakfast.
- Bath-time minimal pairs game with provided word list.
- Parent records one 60-second video sample mid-week; uploads via portal.

PARENT GOALS

- Recast Aria's reductions as the full word once per attempt — do not ask her to repeat.
- Notice and praise spontaneous use of target final consonants ("you said 'cup' — I heard the /p/!").

To: Anna M. · Subject: A quick note after our call about Aria

DRAFT — clinician must review

Preview — ready to send via parent portal

Hi Anna,

Thanks for taking the call this afternoon — it was lovely to hear more about Aria. From what you described and the picture sample we tried together, we have a clear starting point.

WHAT WE AGREED

A short focused block of four sessions, every two weeks, working on Aria's final sounds (the /t, d, k, g/ at the ends of words) and one substitution pattern. I'm not concerned about her language — she's expressive and engaged. The goal is intelligibility at nursery within this term.

THINGS TO TRY AT HOME (5 MINUTES A DAY)

- Sound-of-the-week cards. 3 repetitions at breakfast.
- Bath-time minimal pairs. I'll send a printable list.
- One short video. A 60-second clip of free play mid-week — upload via the portal.

WHAT TO NOTICE

- Any clear final sounds Aria produces on her own — celebrate them out loud.
- Moments where she repeats herself when not understood — write down a couple of examples.
- Ear-related concerns (poking, asking for the TV louder) — useful background context.

I'll see you on Tuesday 2 June at 15:00. Reply to this note or call the practice if anything comes up before then.

Warm wishes,
Monal

AUDIT TRAIL

Every suggestion has a paper trail.

A read-only ledger per case. AI events sit beside clinician events. Nothing AI-only ever advances a case forward.

- ✓ **Append-only.** Clinician acts cannot be revoked, only superseded.
- ✓ **7-year retention** aligned to HCPC record-keeping guidance.
- ✓ **Actor labelled per event:** parent, AI, clinician, or system.
- ✓ **Override is healthy.** Recorded with the clinician's own reason, not flagged as an error.
- ✓ **Disclosure assertion is P0.** A nightly job verifies every published summary carries the AI disclosure footer.

Design-fidelity mock — services/audit.ts shape

THE MATH · DOCUMENTED, NOT INVENTED

About 30–60 minutes per case. Roughly one admin afternoon a week back.

Every number traces to a documented metric in this repo's ML design notes. We show ranges, not single numbers — and we never claim "Sona saves 60 minutes."

STAGE	TODAY (MANUAL)	WITH SONA TARGET	SOURCE
Intake reading + triage prep	5–10 min / case	–20% prep time	docs/ml/triage-capture.md · "Prep time reduction"
Session plan drafting	20–45 min / case	≤ 15 min (T2P)	docs/ml/session-plan.md · "Time to plan"
Parent summary drafting	15–30 min / case	≤ 8 min	docs/ml/summary-generator.md · "Clinician edit time"
Per-case total	40–85 min	15–25 min	Derived
At 3–8 cases / week (Monal's stated volume)	2–11 hr / week	0.75–3 hr / week	docs/ml/triage-capture.md "Override rate" + caseload note

30–60 min

saved per prepared case (range, not a single number)

Derived from docs/ml/* per-stage targets

~1 afternoon

of admin time back per week at typical caseloads

3–8 cases/week × 30–60 min saved

HONESTY SLIDE

What's real today · what's the 90-day vision.

A clinician will sniff out vaporware in seconds. So we draw the line out loud.

Real today

SHIPPED

Built, tested, captured in the previous slides as-is.

✓

8-step parent intake · live on web, end-to-end + widget tested.

✓

Audit ledger · every parent / AI / clinician event logged, 7-year retention.

✓

Case management + slot-based booking · clinician dashboard with seeded caseload.

✓

Triage capture flow · 4 outcomes, clinician-recorded, append-only.

✓

Design system + tokens · same brand on every screen.

90-day vision

IN BUILD

Schemas designed and stubs in place; AI drafts in this deck are design-fidelity mocks.

→

AI prep brief on case open · probe areas, red flags, suggested triage with rationale.

→

Session plan generation · SMART goals, activities, home practice — EHCP-aware.

→

Parent summary draft · tone & reading-level controls, enforced disclosure footer.

→

Calendar sync · clinician + parent booking on real diaries.

→

Telehealth handoff · structured prep on the way into a video consult.

Aria M.

4y · speech-sound delay + attention

Hero of this deck. Clean, sympathetic case.

Jaden O.

7y · stutter

Shows EHCP-aware behaviour end-to-end.

EHCP

Mia R.

11y · social communication

Older end of the age range; secondary transition.

Theo K.

3y · feeding

Breadth beyond pure speech sounds.

THE ASK

What would make Sona **switchable** for you?

We're booking 30-minute feedback sessions this week. Three things we'd love your honest read on:

1 · Does the prep brief earn its place?

If the suggested pathway plus three probe questions reliably nudges your thinking, we keep it. If you'd swipe past it, we cut it.

2 · Where does the session plan need to bend?

EHCP framing, materials, parent goals — which section is currently the bottleneck on your Tuesday?

3 · Is "DRAFT + clinician must review" enough?

Or does the regulatory bar need a tighter UI affordance before a single AI line is read by a parent?

CREDITS & LICENCES

What's in this deck.

Nothing in this deck uses real client data. Everything is either synthesised by the team or licensed for reuse.
