

Sona — Care Journey & Product Overview

An AI co-pilot that reduces admin burnout in UK private Speech & Language Therapy (SLT) — giving clinicians more productive time for care across a client's first 30 days.

WHAT IS SONA?

Sona is an AI co-pilot for UK private Speech & Language Therapy (SLT) practices.

It does the repetitive admin alongside the clinician — capturing the enquiry, running a smart intake, prepping the consult, recording the triage decision, and drafting the first session plan and family summary, always as drafts for the clinician to review.

Sona augments clinicians. Its purpose is to increase human productivity — less admin burnout, more time for care.

HOW TO READ THIS

Three views, read left → right:

- Executive** — the journey & the value
- Product** — the proposed solution
- Process flow** — the To-Be swimlane

WHO'S WHO

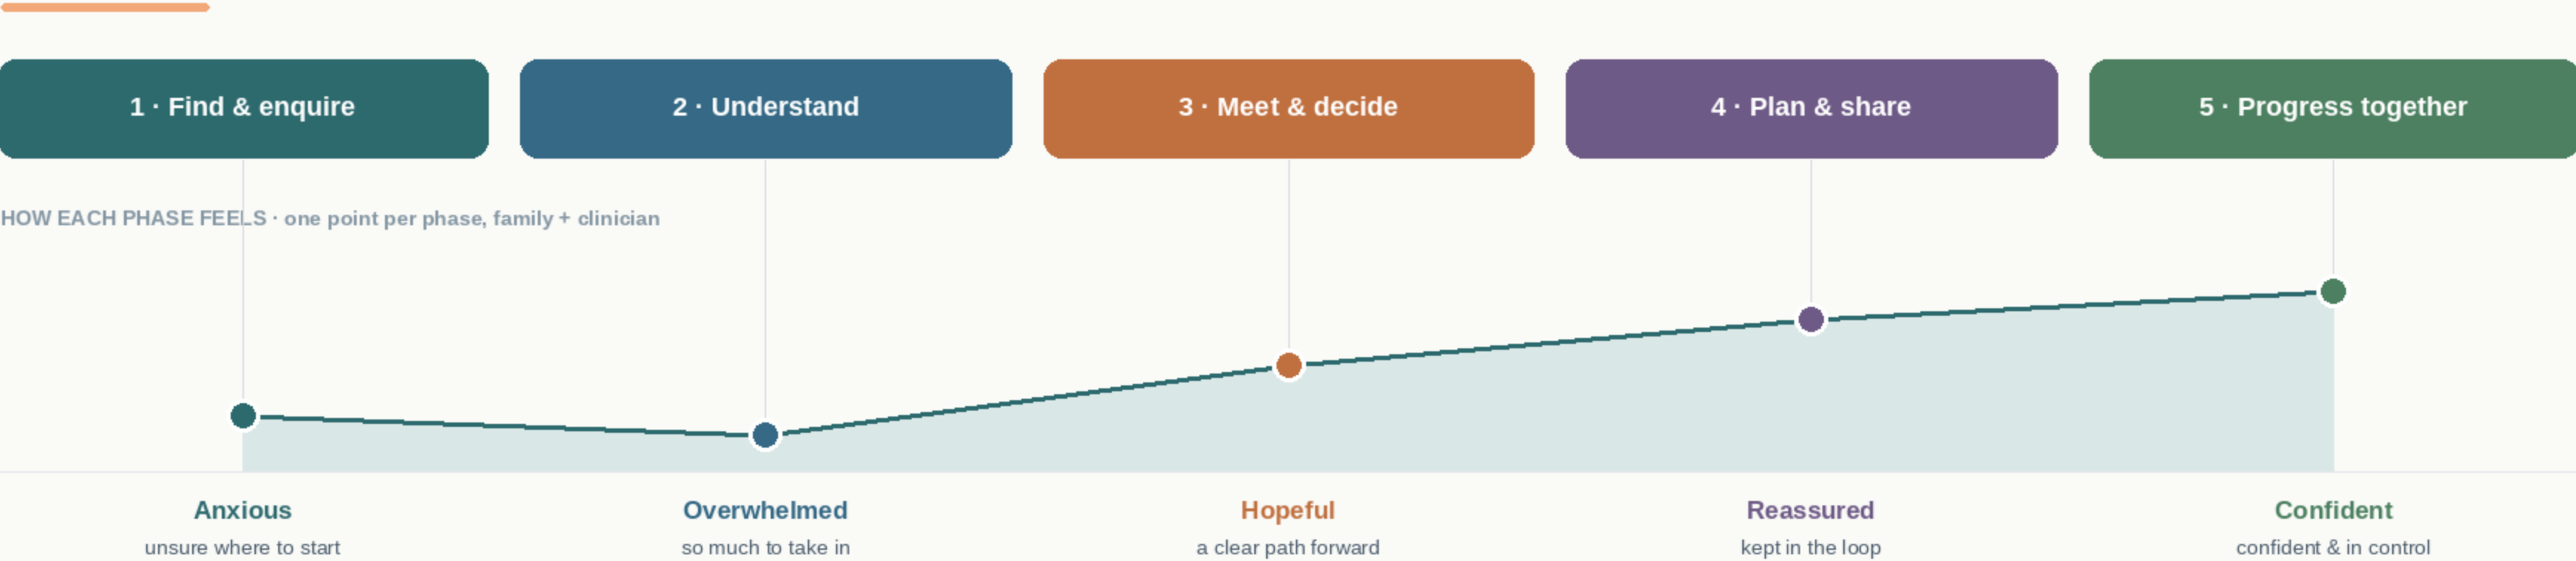

client / parent / carer — the family or adult client
clinician / SLT — the therapist · practice — the private clinic

ANCHOR PRINCIPLES

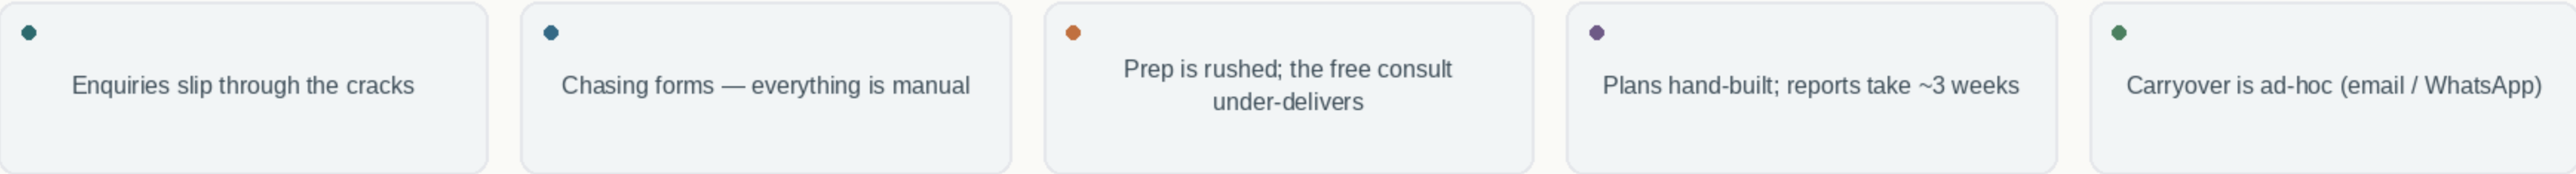

- AI drafts, clinician decides
- No screen time for children
- UK data residency + audit by construction
- Augment people, never replace them

The care journey at a glance

How a new SLT case feels today, and where Sona reduces admin burnout and adds value — across five phases.

TODAY'S PAIN — BY PHASE

TARGET OUTCOMES

≥ 4 hours / month

productive hours given back to each clinician

Same-day

client summaries & reports, vs the ~3-week manual baseline

The proposed solution

The client's first 30 days as nine stages grouped into five phases — for each stage: what Sona does, and the surface that delivers it.

Phase	Find & enquire	Understand		Meet & decide			Plan & share		Progress together
Stage	1 · Referral	2 · Smart intake	3 · Intake review	4 · Consult prep	5 · Consultation	6 · Triage	7 · Session plan	8 · Family summary	9 · Carryover
What Sona does	Capture every enquiry — one case record + audit trail.	Adaptive magic-link intake + live status + consent.	One-screen client overview / summary.	AI prep brief — probes, red flags, references.	Schedule the consult + calendar / video links.	Capture triage outcome + rationale.	AI-drafted, clinician-edited session plan.	Tone / reading-level client summary via portal.	Resources, progress portal & report loop.
Surface / owner	Clinician web — enquiry queue	Family / client portal	Clinician web	Clinician web + AI	Clinician web + calendar / video	Clinician web — triage	Clinician web + AI	Client app / portal + AI	Client app + clinician web

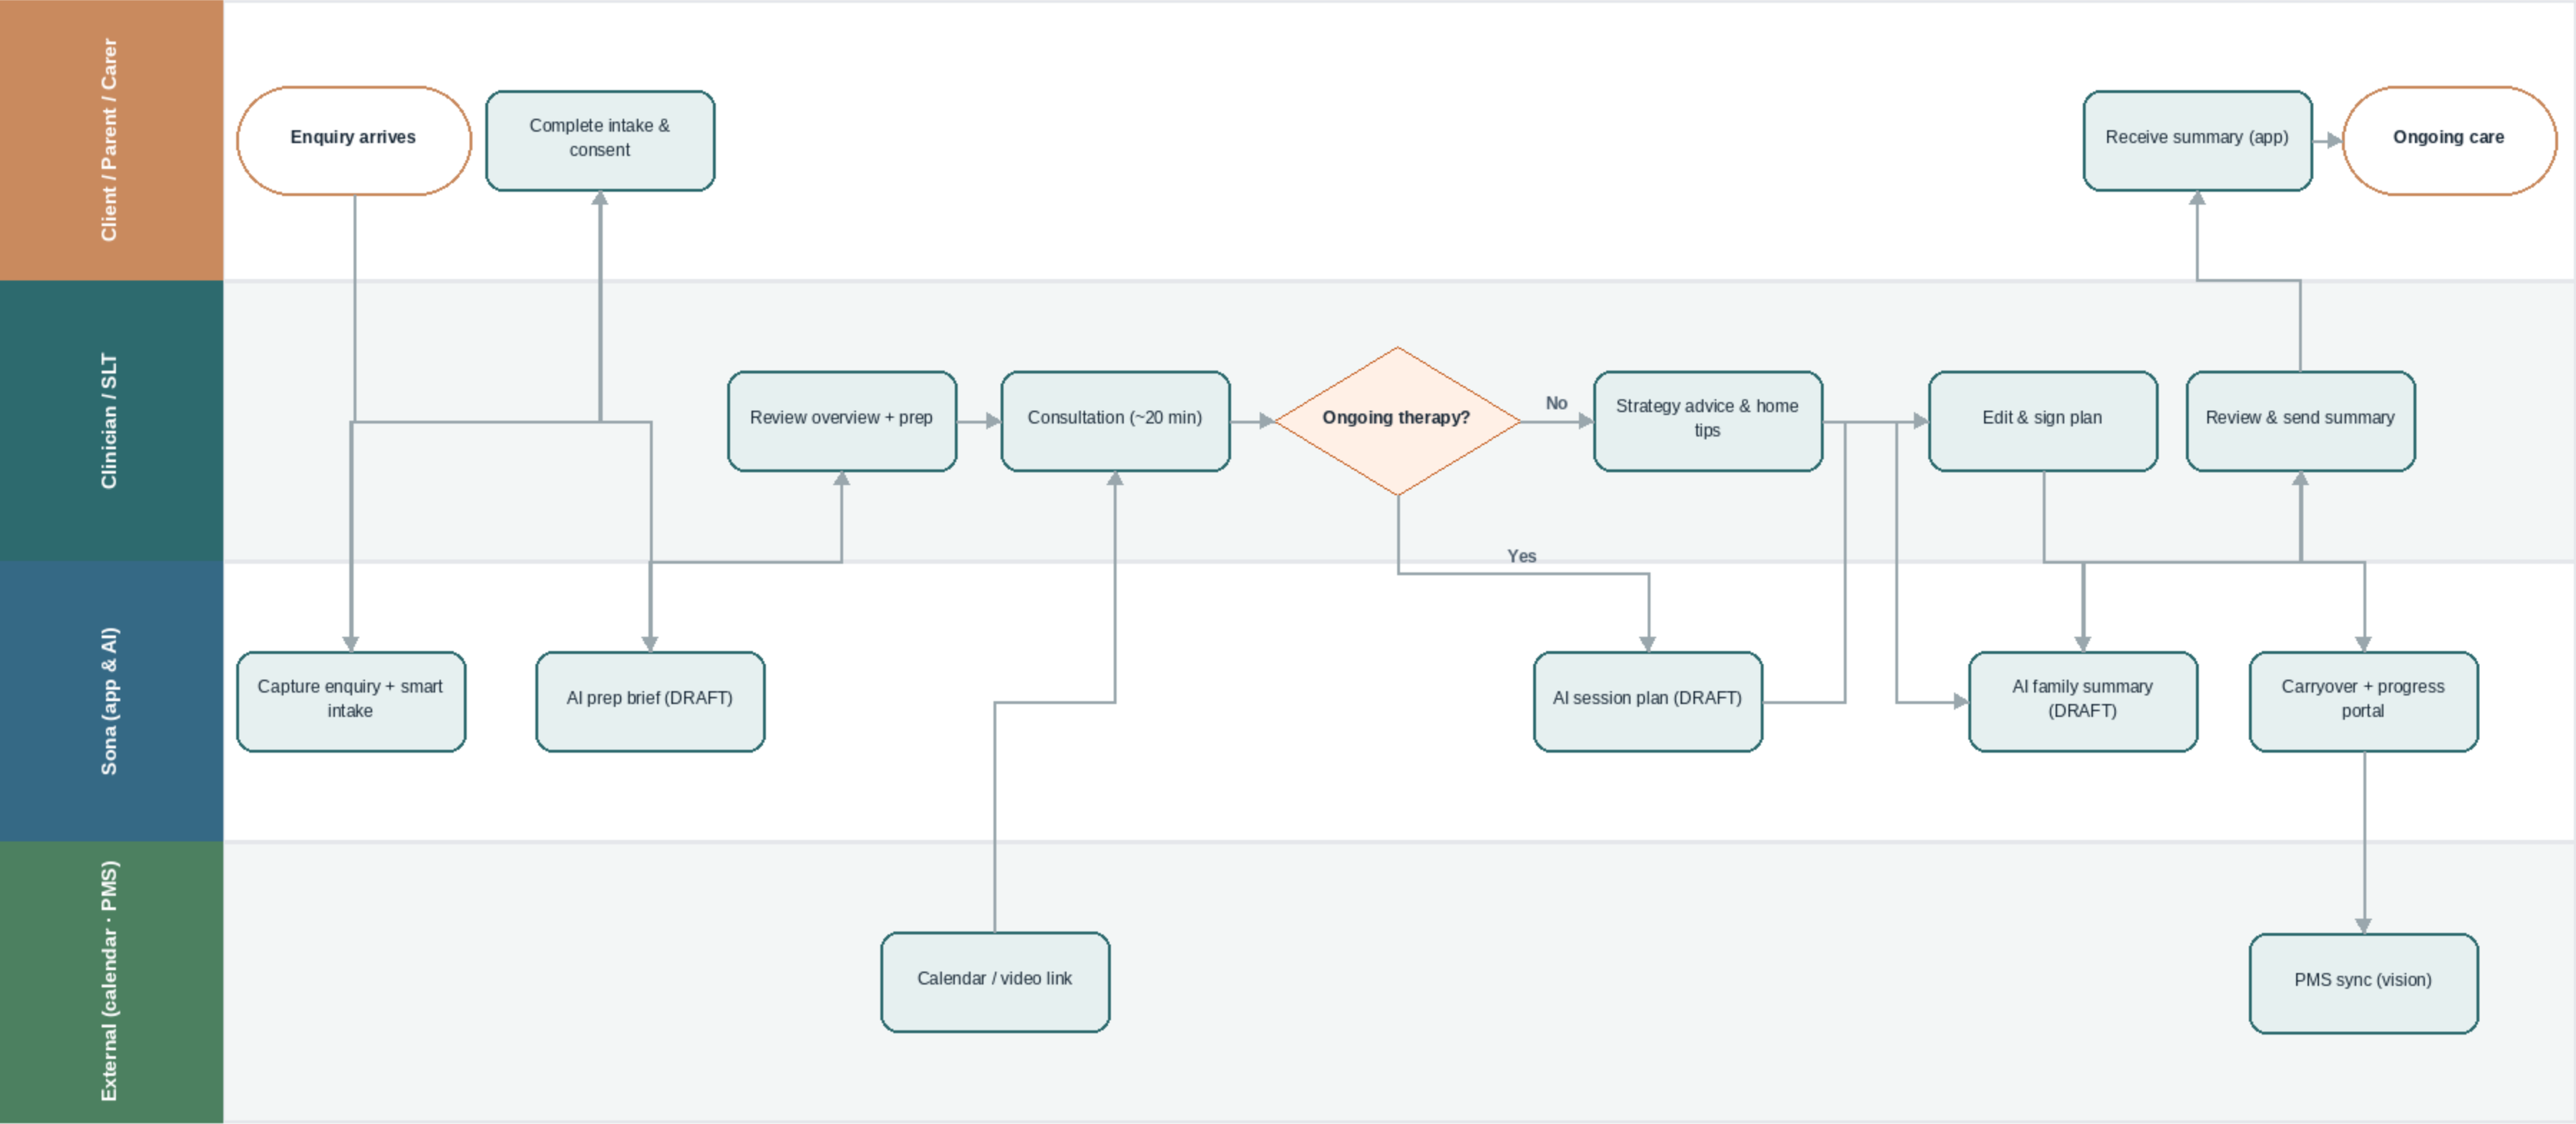

WHERE SONA WINS

- Own the first 30 days as one reviewed loop
- Trust is the moat — clinician signs every AI draft
- Start paediatric, then generalise
- UK data residency + clinical audit

Colour groups the nine stages into their five phases. - Generalized across SLTs (Pediatric & Adult).

How the journey runs with Sona

A swimlane map of the proposed process.

Shapes: rounded = task · diamond = decision · pill = start / end. DRAFT = AI artifact the clinician reviews & signs.
