

Sona — Care Journey & Product Overview

An AI co-pilot that reduces admin burnout in UK private Speech & Language Therapy (SLT) — giving clinicians more productive time for care across a client's first 30 days.

WHAT IS SONA?

Sona is an AI co-pilot for UK private Speech & Language Therapy (SLT) practices.

It does the repetitive admin alongside the clinician — capturing the enquiry, smart intake, consult prep, the triage decision, the first session plan and the family summary, always as drafts for the clinician to review.

Sona augments clinicians — it increases human productivity: less admin burnout, more time for care.

HOW TO READ THIS

Three views, read left → right:

Executive — the journey & the value

Product — the proposed solution

Process flow — the To-Be swimlane

WHO'S WHO

client / parent / carer — the family or adult client

clinician / SLT — the therapist · practice — the private clinic

ANCHOR PRINCIPLES

AI drafts, clinician decides

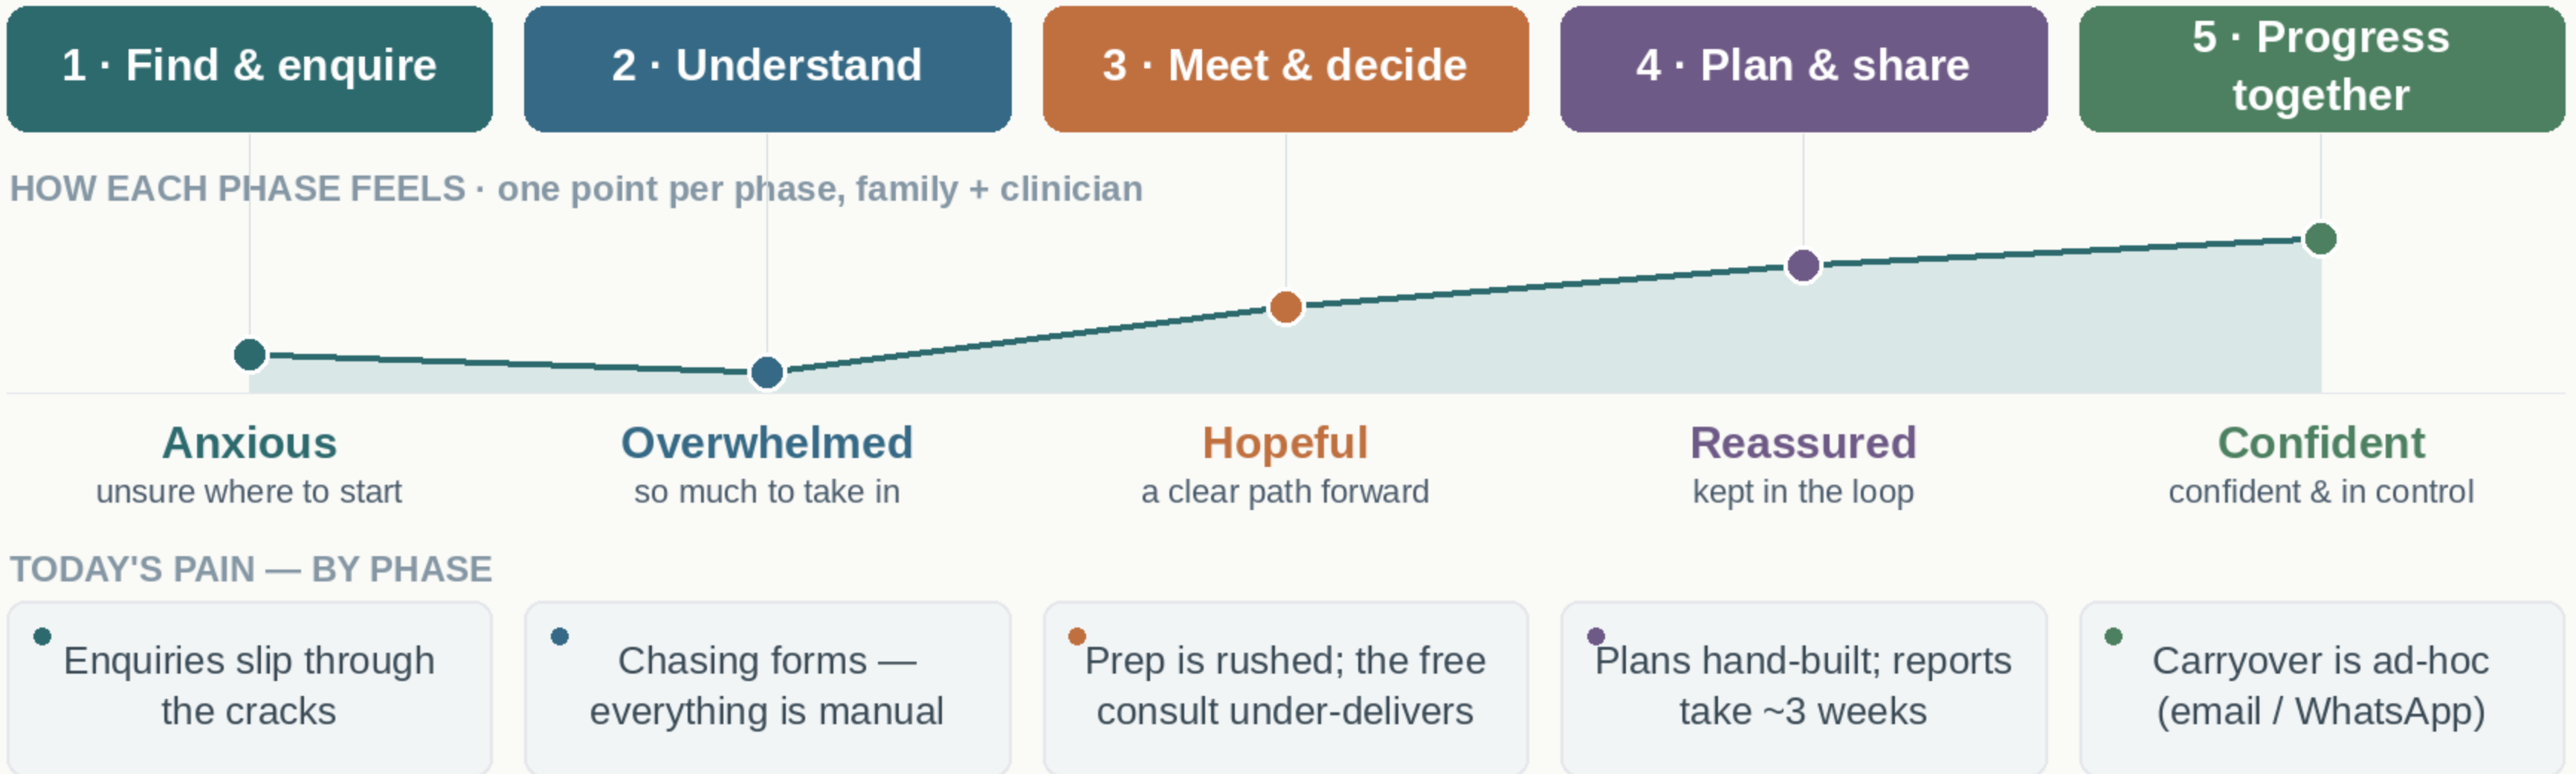

No screen time for children

UK data residency + audit

Augment people, never replace

The care journey at a glance

How a new SLT case feels today, and where Sona reduces admin burnout and adds value — across five phases.

TARGET OUTCOMES

≥ 4 hours / month

productive hours given back to each clinician

Same-day

client summaries & reports, vs the ~3-week manual baseline

The proposed solution

The first 30 days as nine stages grouped into five phases — what Sona does, and the surface that delivers it.

Phase	Find & enquire	Understand		Meet & decide			Plan & share		Progress together
Stage	1 · Referral	2 · Smart intake	3 · Intake review	4 · Consult prep	5 · Consultation	6 · Triage	7 · Session plan	8 · Family summary	9 · Carryover
What Sona does	Capture enquiry + audit trail	Adaptive intake + status + consent	One-screen client overview	AI prep brief (DRAFT)	Schedule consult + calendar / video	Capture triage + rationale	AI session plan (DRAFT)	Tone-adjusted client summary	Resources + progress portal
Surface / owner	Clinician web	Family / client app	Clinician web	Clinician web + AI	Clinician web + calendar	Clinician web	Clinician web + AI	Client app + AI	Client app + web

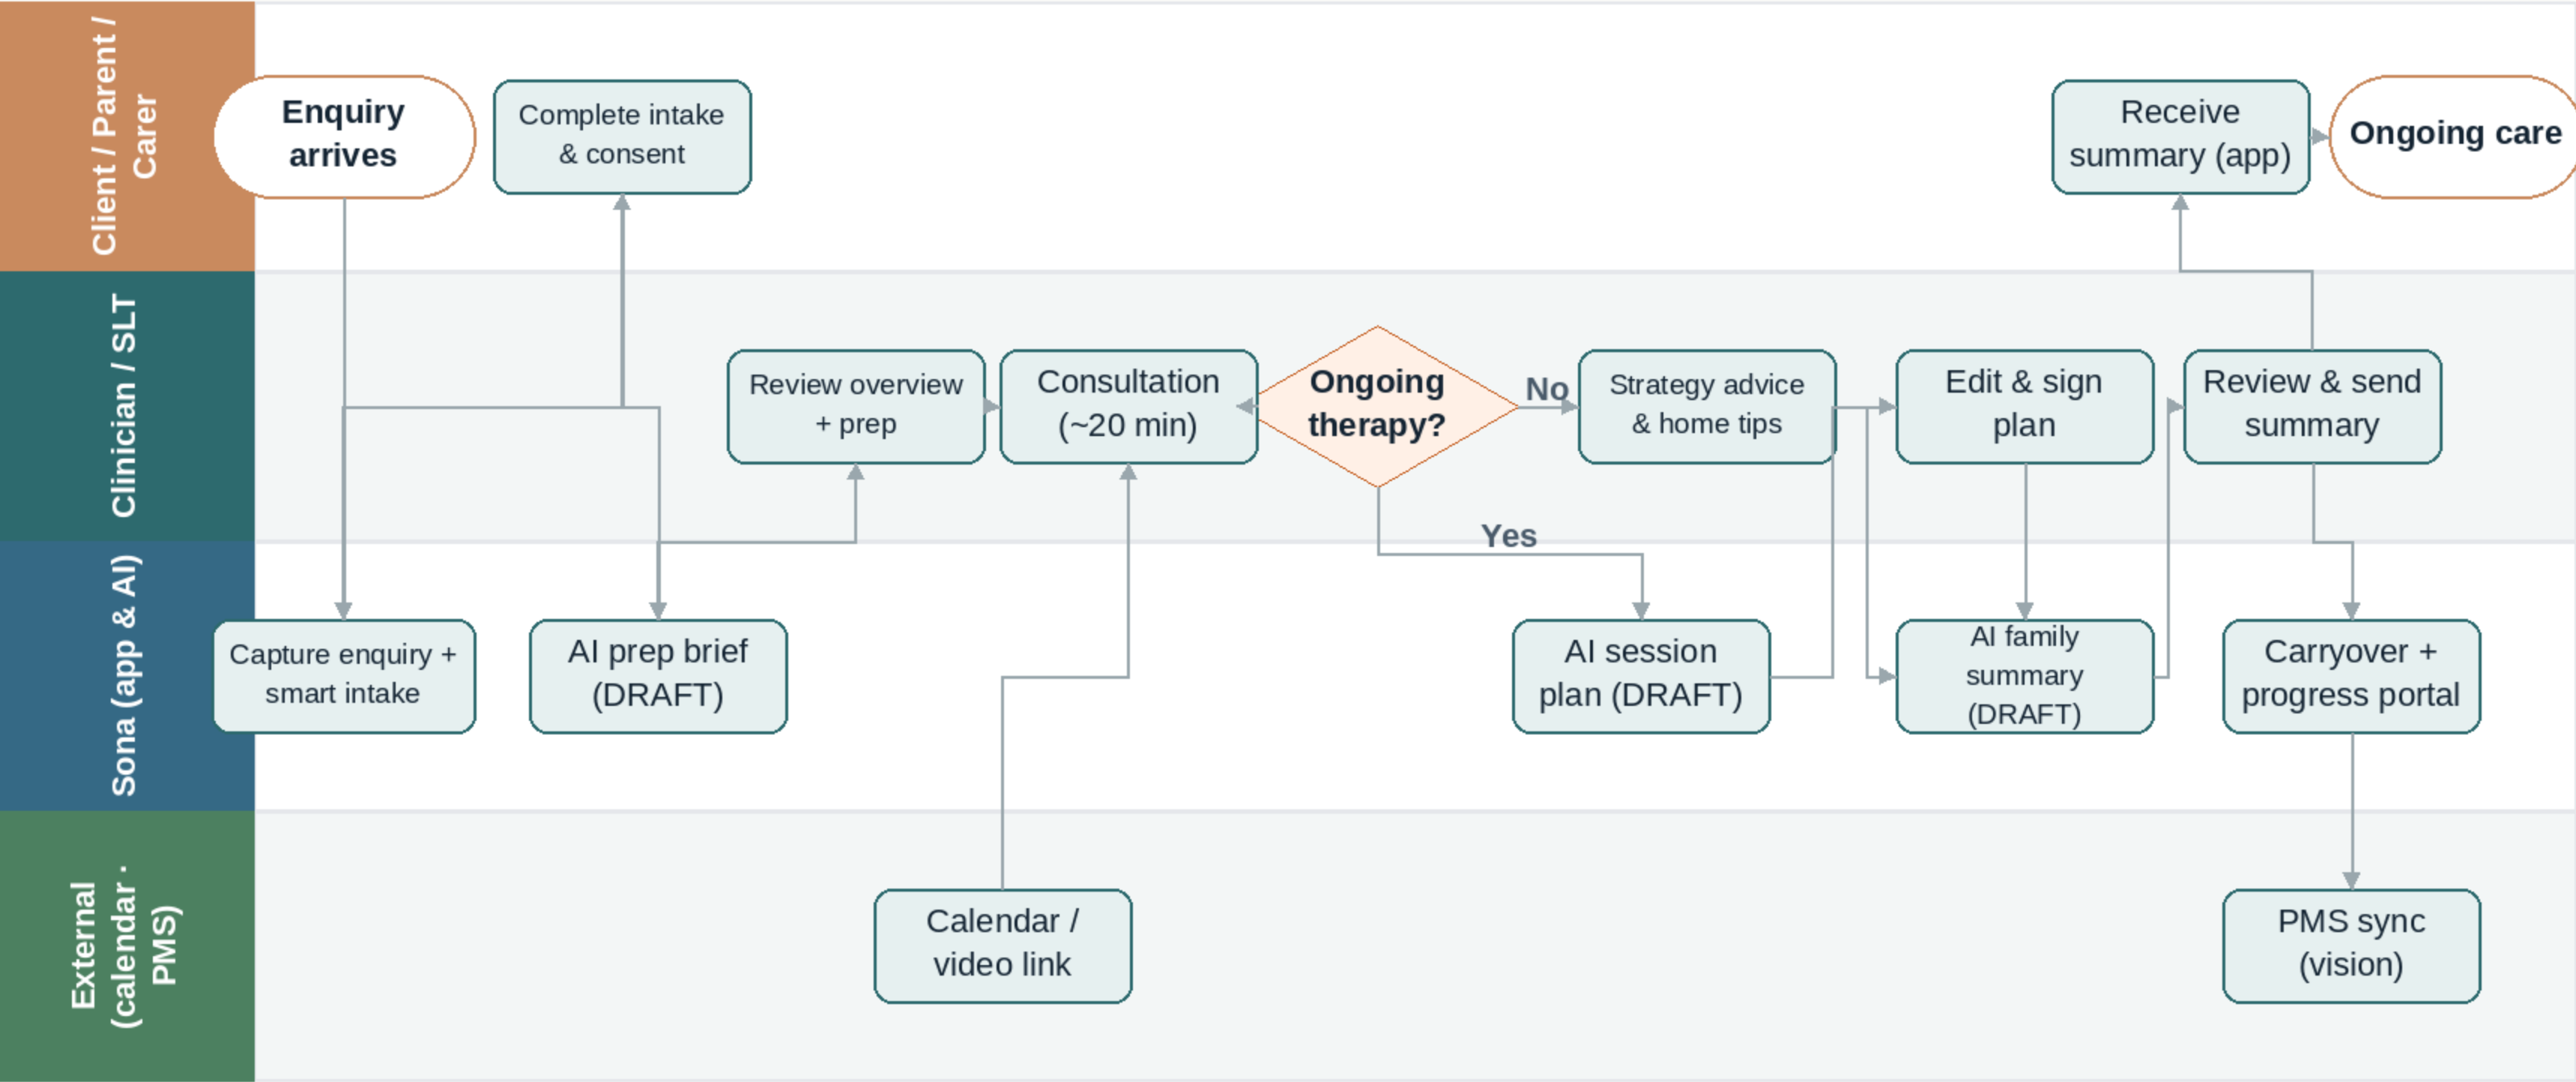

WHERE SONA WINS

Own the first 30 days as one loop	Trust is the moat — clinician signs every draft	Start paediatric, then generalise	UK data residency + clinical audit
-----------------------------------	---	-----------------------------------	------------------------------------

Colour groups the nine stages into their five phases. · Generalized across SLTs (Pediatric & Adult).

How the journey runs with Sona

A swimlane map of the proposed (To-Be) process — the basis for prototypes and screens.

Shapes: rounded = task · diamond = decision · pill = start / end. DRAFT = AI artifact the clinician reviews & signs.
